EDUCATION

Cornell University, **Ithaca, New York** Jan 2024 - Dec 2024
Master of Engineering: Computer Science; Flexible in Relocation
Relevant Course: Parallel Computing, Computer Vision, 3D Reconstruction, Computer Networks, Operating Systems

University of British Columbia, Vancouver, BC Sep 2019 - May 2023
Bachelor of Science: Computer Science And Mathematics; With Distinction
Relevant Course: Test-Driven Development, Applied AI & ML, Databases, Data Structures & Algorithms, Object-Oriented Programming, System design, Linux System, Linear Algebra

SKILLS

Languages	Java, C, C++, Python, C#, JavaScript, TypeScript, Kotlin, PHP, HTML/CSS, Bash
DataBase & Cloud	MySQL, MongoDB, Oracle, NoSQL, DynamoDB, AWS (Cloud Practitioner)
Libraries	PyTorch, TensorFlow, React, Node.js, Cuda, MPI, OpenMP, Flask, Spring, Maven
Tools	Git, AWS, Docker

WORK EXPERIENCES

Software Research & Development Intern Sep 2021 - April 2022
INTEL Corporation, Vancouver, BC

- Developed and implemented ***C***-based optimization settings for quality-speed tradeoffs of low-delay streaming and video compression in the widely-used ***SVT-AV1*** encoder, decreased ~10% bitrate loss and increased ~8% speed.
- Developed testing scripts using ***Python*** and ran on ***AWS EC2 Linux*** instances for evaluating bitrate/speed tradeoffs for existing ***SVT-AV1*** features; Collaborated with teams to perform comparative analysis among video encoders in the market using data obtained from tests; addressed performance and stability issues through debugging.
- Designed and implemented an optimized video decoder program using ***C***. Simplified the 5 decoding levels to a more maintainable 2-level system by evaluating the decoder speed against existing solutions in the market.
- Implemented unit tests using ***Check framework*** , achieved test coverage of 95%+ and packaged the program using ***CMake***.

Software Developer Intern July 2019 - Aug 2019
Tencent Holdings Ltd, **Shenzhen, China**

- Built an event-driven notification system using ***Python*** and ***Flask framework*** to keep track of keywords and feedback given by users on stock forums.
- Extracted dynamically generated content from ***JavaScript***-based stock forums by integrating ***Python*** libraries ***Scrapy*** and ***Splash***, enabling server-side ***JavaScript*** execution and rendering for full ***HTML*** access. Utilized dynamic ***IP***s and controlled crawling rate to avoid throttling.
- Persisted users post data into ***MySQL*** databases consisting of >5G user data for further analysis and relational database management. Crafted schema to encapsulate essential attributes and employed strategic indexing on crucial attributes that are frequently used in search for efficient data retrieval.

PROJECTS

Hospital Management System Sep 2019 - Dec 2019

- Designed and implemented a full-stack hospital management system using ***Java***, ***Spring framework*** and ***MySQL*** to help hospital receptionists to better track patient appointments, health status, and doctor availability, etc.
- Utilized the ***Spring RestController*** to build ***Restful APIs*** for patient data retrieval and update. Created ***GUI*** using Java ***Swing Framework*** for user interaction, and employed ***Maven*** for dependency management.
- Applied ***OOP principles*** and ***Observer pattern*** in order to make the connections between the objects of doctors and patients more transparent while avoiding tight coupling between the two objects.

Domain-Specific Language May 2022 - June 2022

- Designed and implemented a full-stack website generator using ***Java*** and ***JavaScript*** for users to design, create, and decorate their own webpages with human-familiar language.
- Utilized ***Antlr*** to tokenize user inputs in terms of English grammar, then implemented dynamic webpage rendering to generate the parsed tokens using ***React***. Utilized ***Axios*** to asynchronously fetch remote resources through ***HTTP*** requests.
